

# Questions

1. Why are you taking CSC148?

Basically because I want to be a specialist in Computer Science. I haven't take the CSC108 because I have previously studied about the C programming language and I have learnt Python by myself (just a little bit of course). Moreover, I thought I would learn useful things in this course.

2.A CSC148 student is nervous because he thinks he doesn't know as much as his classmates coming into the course. What advice could you give him?

I would suggest him to just follow the professor's and the TA's instruction because they would teach those skills that is precisely necessary. But if he wants to be more competitive and perform as well as those students who has learnt a lot before, I would suggest him to learn more after class like in coursera or read some books in CS and ask professors and TAs for help.

3.What is one question you have for David? [Doesn't have to be course-related.]

What one most important thing is needed to be a successful CSer?  
What is the most difficult thing you've encountered during studying CS?

Name: Mohan Zhang

Student num: 1002748716
