

Questions

1, You just handed in your first major assignment in this course.

How do you think you did, and why?

I thought I've finished it well, because I've past every test you've give us and do some test in some extreme condition. But it takes me over 18 hours, so I think that means I'm not that familiar with Python programming. To be honest, it's really tiresome.

2, If you could go back in time to the start of the term and give **yourself** one piece of advice, what would it be? (Not necessarily about CSC148.)

Choose the course with more comfortable time and choose more challenging course XD.

3, Name one **specific** thing that you are enjoying/appreciating about CSC148 so far.

CSC148 is not that stressful in that it's Lab problems are not going to mark by the correctness. And David explains things really clearly (I'm not flattering but telling the truth) and will use Q&A section to make it even clearer.

4, Name one **specific** thing that you could suggest to David to improve your learning experience in CSC148.

I don't think tests are good in examine our programming skills and are we really figure things out. I would rather test me by giving

some little assignments and let me solve them in a limited time.
